

CHRISTMAS LIGHTS SAFETY

Look for the Import Commodity Clearance (ICC) stickers. This is a guarantee of reliability and safety of the product. Manufacturers and importers must have Philippine Standard (PS) license.

A set of wire should have an outside size of 1.5mm, and plug must firm and not easily bent.

Products labels should contain the name of manufacturer/supplier/distributor; address and trademark; rated voltage and wattage of the lamp; the mark "For Indoor Use Only"; batch/lot number or bar codes and country of origin.

Do not overload electrical outlets. (Too many plugs in one outlet may generate a lot of heat to start a fire)

Busted fuse and lights should be replaced immediately of the same voltage and wattage.

Turn off the lights before going to bed, even if you are sure of the safety of your lights.

STAY SAFE THIS CHRISTMAS
